Data Flow Diagram

Create a Data Flow Diagram (DFD) to illustrate how data moves through the Human Development Index Prediction System. The diagram should show the interaction between users, the machine learning model, the dataset, and the prediction results.

DFD Symbol Legend

Symbol	Name	Description
Oval / Rounded shape	External Entity	Represents an external user or organization interacting with the system (e.g., Researcher, Policy Maker, Development Analyst).
Rectangle with numbered header	Process	Represents a processing activity such as data validation, HDI prediction, or result generation performed by the system.
Rectangle (solid fill, no number)	Data Store	Stores data used by the application, such as the HDI dataset, trained machine learning model, and prediction history.
Labeled arrow	Data Flow	Represents the movement of data between users, processes, and data stores, indicating the information being exchanged.

Example

The diagram below illustrates how users provide development indicators to the Human Development Index Prediction System. The system validates the input, processes it using the trained Machine Learning model, accesses the HDI dataset where required, and generates the predicted HDI score or category. The prediction results are then returned to the user for analysis and decision-making.

Example – Data Flow Diagram (DFD)
