Maximum Marks	3 Marks

Project Executable Files

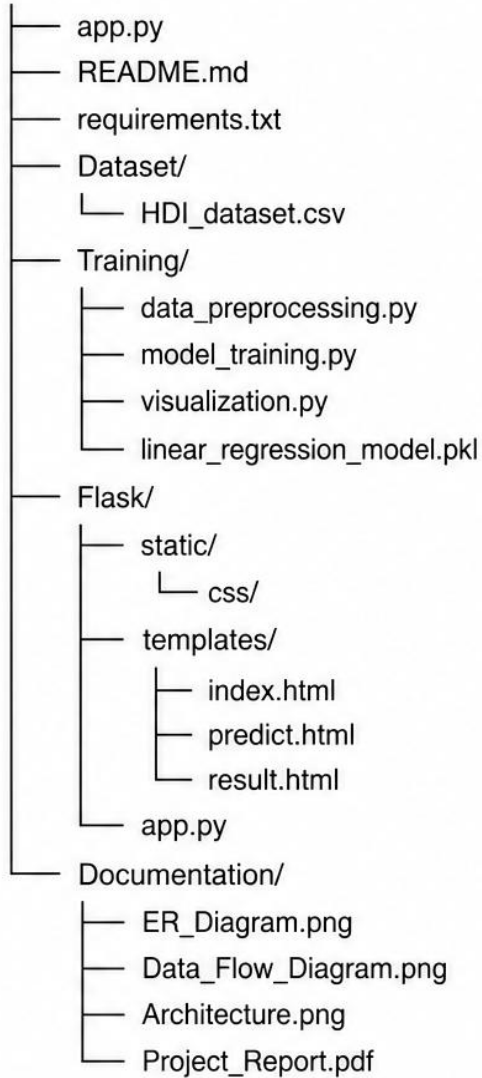

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes
5	Environment configuration file (.env.example similar) or	No
6	Deployed application URL (if hosted)	NA
7	APK / Executable binary (if applicable for mobile/desktop apps)	N/A
8	Dockerfile / Containerization config (if applicable)	N/A
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Human- Development-Index-Prediction/

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not Rendered
Login Credentials (Demo)	Not Required

Platform / Hosting Provider	Flask Local Server
Repository Link	https://github.com/kethineedilalitha09/Human_Development_Index
Demo Video Link	Demo Video Link

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

1. Install Python 3.10 or later.
2. Install all required Python libraries using the requirements file.
`pip install -r requirements.txt`
3. Navigate to the project directory.
4. Run the Flask application.
`python app.py`
5. Open a web browser and visit:
`http://127.0.0.1:5000/`
6. Enter the required Human Development indicators such as Life Expectancy, Mean Years of Schooling, Expected Years of Schooling, and Gross National Income (GNI) per Capita.
7. Click the **Predict** button to obtain the predicted Human Development Index (HDI) score.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Prediction accuracy depends on the quality and completeness of the input dataset.	Use updated and accurate HDI data for better predictions.
2	The application currently runs only on the local Flask server.	Can be deployed to cloud platforms such as Render, Railway, or Heroku
3	The model uses Linear Regression and may not capture highly complex relationships among development indicators.	Future versions can use advanced regression algorithms such as Random Forest Regression or XGBoost.
